DISTRIBUTORS BULLETIN No. 43

PILOTS CHECK LIST FOR LANDING

As an additional precautionary element for landing gear position warning, Republic has designed a simplified decal check list to be mounted permanently on the Seabee instrument panel immediately beneath and between the airspeed and the bank and slip indicator. (Apply as "decalcomania" by soaking for 2 minutes in water then mount on the panel after removing from rear surfaces.)

Due to the elimination of the swivel lock in the steerable tail-wheel installation it is necessary, in order to avoid confusion, to install a modified decal which deletes the "tail wheel locked" check on the "land" side of the checklist. One of the modified lists will be included in each steerable tail wheel spares kit for replacement of the standard decal.

There are enclosed sufficient check lists of the applicable type for each airplane in your territory; it is requested that these be forwarded to the operators and owners of the Seabees at your earliest convenience.
