Distributors' No. 48

STEERABLE TAILWHEEL KITS - ITEM 1536

High Fall winds will soon be here again with the complaint that Seabees are hard to taxi without a steerable tailwheel. We expect a sudden rush of orders when this occurs so we are again advising you for the availability of Steerable Tailwheel Kits as outlined in Distributor's Service News No. 44.

As previously announced, kits for all airplanes on which the acceptance papers were signed by the Distributor on or after April 7, 1947, will be furnished at no charge. Kits for airplanes accepted before this date will be furnished at our manufacturing cost of \$66.00, net no discount.

Since our records indicate that there are a considerable number of Seabees operating without Steerable Tailwheels, it is advisable that you canvas all dealers and individual owners in your area again and then send us your purchase order including aircraft serial numbers for all kits desired. This is the last call, so please order early.
