SEABEE HOIST SLING

Because of the number of requests from Seabee owners, a hoist sling has been designed for a 4G full gross loading and C. A. A. approval obtained for installation in the Seabee. This sling is a semi-permanent installation as it is attached to internal structure except for the shackle, which protrudes from the top of the forward engine cowl. Two tie rods anchor the shackle to the forward cross-tie while a third rod picks up an engine case bolt thereby stabilizing the assembly. A canvas cover prevents rain or water spray from entering the hole in the cowl.

Kits containing all necessary parts and instructions may be ordered under Spare Parts, Item 1528, Hoist Sling Kit, for a list price of \$42.83. Based on several installations made at the factory, it is estimated that the installation of this sling will require approximately 16 man-hours.
